**Reason for Visit**

prostate 9.47 cannot exclude malignancy

**Chief Complaint**

Elevated PSA

**History of Present Illness**

This is a 59-year-old Caucasian male with past medical history of hypertension that is referred to our clinic for elevated PSA. Patient is currently an inmate and his PSA was checked last month initially 13 and rechecked at 9.47. He has a family history of prostate cancer and his father passed away after undergoing what sounds like a radical prostatectomy and had spread of his disease after surgery. He complains of weak urinary stream and dribbling. He does not feel like he can empty his bladder completely. He also states that he is not taking any medications for his prostate and only medicines he is taking at this time or for high blood pressure. He denies any dysuria and gross hematuria. He denies any night sweats fever bone pain and weight loss.

He also has a history of 17 colon polyps removed during a colonoscopy in 2016.

**Review of Systems**

All 14 systems reviewed negative except as stated in HPI

**Physical Exam****Vitals & Measurements**

T: 36.8 °C (Oral) BP: 109/74

WT: 77 kg

Peripheral Pulse Rate: 109 High (02/24/22 11:59:00)

Gen: No acute distress, well appearing male

HEENT: normocephalic, atraumatic, extra ocular movement intact, oropharynx patent

CV: regular rate

chest: nonlabored breathing, no audible wheezing

abdomen: soft, nontender to palpation, nondistended, no cva tenderness to palpation

bilaterally

MSK: moves all extremities well, distal extremities warm and well perfused

skin: warm and dry

neuro: awake, alert, oriented x3, no gross deficits

psych: normal mood and affect

**Routine Chemistry**

Collected Date	2/24/2022		
Collected Time	14:15 CST		
Procedure		Units	Reference Range
PSA	<b>12.6</b> <sup>f1</sup>	ng/mL	[0.0-4.0]
PSA,Free	0.96 <sup>f2</sup>	ng/mL	[N/A]
% Free PSA	7.6 <sup>f3</sup>	%	

**Result Comments**

f1: PSA  
Roche ECLIA methodology.

According to the American Urological Association, Serum PSA should decrease and remain at undetectable levels after radical prostatectomy. The AUA defines biochemical recurrence as an initial PSA value 0.2 ng/mL or greater followed by a subsequent confirmatory PSA value 0.2 ng/mL or greater. Values obtained with different assay methods or kits cannot be used interchangeably. Results cannot be interpreted as absolute evidence of the presence or absence of malignant disease.

f2: PSA, Free  
Roche ECLIA methodology.

f3: % Free PSA  
The table below lists the probability of prostate cancer for men with non-suspicious DRE results and total PSA between 4 and 10 ng/mL, by patient age (Catalona et al, JAMA 1998, 279:1542).

% Free PSA	50-64 yr	65-75 yr
0.00-10.00%	56%	55%
10.01-15.00%	24%	35%
15.01-20.00%	17%	23%
20.01-25.00%	10%	20%
>25.00%	5%	9%

Please note: Catalona et al did not make specific recommendations regarding the use of percent free PSA for any other population of men.

#### **Reason for Exam**

(MRI Prostate w/ + w/o Contrast) elevated psa;Elevated PSA

#### **Report**

EXAMINATION: MRI Prostate w/ + w/o Contrast

DATE: 4/19/2022

CLINICAL: Elevated PSA PSA 2/24/2022: 12.6

COMPARISON: None

TECHNIQUE: MRI of the prostate was performed using a 1.5 Tesla MRI by obtaining multiplanar T2, T1, diffusion weighted images, dynamic contrast-enhanced images after intravenous injection of 10 cc of Gadavist.

#### **FINDINGS:**

The prostate measures approximately 31 cc in volume based on automated and manual contouring of the gland on the Dyna CAD system. Prostate density measuring 0.40 ng/sq ml.

Overall, the prostate demonstrates heterogeneous signal intensity. The capsule is intact and the neurovascular bundles are normal. Seminal vesicles are unremarkable. No evidence for hemorrhage is identified on the T1-weighted images.

Peripheral zone: The peripheral zone appears homogeneous in intensity. There is T2 hypointensity at the peripheral posterior zone of the prostate, centrally towards the right side. This area does not show enhancement on the post contrast images or showing diffusion restriction.

Transitional zone: Heterogeneous appearing transitional zone. No suspicious lesion. No capsular penetration, NV bundle involvement.

Pelvis: Visualized pelvis appears normal with few prominent local regional lymph nodes. One of the lymph node on the left measuring 5 mm.

Diverticulosis without diverticulitis.

Visualized bones: Normal signal intensity without evidence for focal lesions.

#### **IMPRESSION:**

1. Questionable T2 hypointensity area at the posterior aspect of the peripheral gland (PI-RADS 3)

This preliminary report was dictated by Asif Jamal, MD, Radiology Fellow. The report is to be verified and validated by an

Prostate biopsy

**Chief Complaint**

Pbx

**History of Present Illness**

This is a 59-year-old Caucasian male with past medical history of hypertension that is referred to our clinic for elevated PSA. Patient is currently an inmate and his PSA was checked at the facility, and was initially 13. It was rechecked at 9.47. We then checked his PSA in clinic in 2/2022 and it was 12.6, 7.6%fPSA. He had a mpMRI that demonstrated a PIRADS 3 lesion in the posterior peripheral zone.

He presents today for prostate biopsy. He states that he was not administered abx or enema from his facility. He has a family history of prostate cancer and his father passed away after undergoing what sounds like a radical prostatectomy and had spread of his disease after surgery. He continues to have significant urinary complaints today too; he complains of weak urinary stream and dribbling. He does not feel like he can empty his bladder completely. He has been taking tamsulosin and it initially helped but he does not see much benefit. He denies any dysuria and gross hematuria. He denies any night sweats fever bone pain and weight loss.

He also has a history of 17 colon polyps removed during a colonoscopy in 2016.

**Review of Systems**

14 point review of systems performed and negative except per HPI.

Disch: 6/2/2022

DOB/Age/Gender: 9/9/1962 60 years Male

Admitting: Ledbetter MD, Christopher K

**Office Clinic Notes**

psych: normal mood and affect

**Procedure Note - Prostate biopsy:**

We discussed the procedure in detail, benefits, alternatives, and risks which include but are not limited to bleeding (in the urine, stool, and even semen that can possibly last a few weeks), infection (including UTI, prostatitis, and/or urosepsis), temporary or permanent ED, damage to the urethra/bladder/rectum, failure of the procedure to detect prostate cancer, and even need for additional treatments or procedures if prostate cancer is detected. The patient knows to go to the ER for evaluation if he develops any significant and/or persistent bleeding, lightheadedness, dizziness, inability to tolerate PO intake, or fevers >101.4F. The patient verbalizes understanding and wishes to proceed. Consent obtained

Procedure: Prostate Biopsy with TRUS

Preprocedure dx: Elevated PSA

Post-procedure dx: same

Attending: Dr. Ledbetter who was present

Complications: none

EBL: less than 5cc

Description of procedure: The patient was administered a dose of IM gentamicin. Patient was placed in the left lateral decubitus position. Time-out was performed. DRE was performed showing 30g prostate; prostate was firm and somewhat nodular on posterior aspect and in the right lobe; prostate was also significantly tender to palpation. TRUS was used to inject 5mL of 1% lidocaine for prostatic nerve block bilaterally. The prostate volume was then measured with TRUS and found to be 27g. We then began taking 6 random sample core needle biopsies on the left prostate. We then turned out attention to the right lobe taking again 6 core needle samples. The TRUS was removed and pressure was held to achieve hemostasis. The patient tolerated the procedure well.

**Assessment/Plan****1. Elevated PSA**

- Pbx performed today as above, after administration of gentamicin 80mg IM (due to PCN allergy)
- **PLEASE PRESCRIBE Bactrim DS 800mg-160mg tablet BID x7 days for UTI.**
- UCx today, will f/u and change abx above w/ prison if necessary
- Cont tamsulosin
- PVR ~150-200cc today by bladder scan. Pt also had a bladder US yesterday with PVR of 120cc. D/w patient that his PVR is elevated, but that he is voiding some. However, his risk of urinary retention is high. We decided to proceed with catheter placement today after shared decision making.
- Will attempt TOV at next visit
- RTC 2 weeks for discussion of pathology and TOV

**Ordered:**

gentamicin, 80 mg = 2 mL, IM, Injection, Once, Prophylaxis, Surgery-Beta-Lactam Allergy,  
First Dose: 06/02/22 14:00:00 CDT, Stop Date: 06/02/22 14:00:00 CDT, 06/02/22 13:34:00 CDT

**Reason for Visit**

f/u prostate biopsy

**Chief Complaint**

F/U Prostate biopsy

**History of Present Illness**

This is a 59-year-old Caucasian male with past medical history of hypertension that is referred to our clinic for elevated PSA. Patient is currently an inmate and his PSA was checked at the facility, and was initially 13. It was rechecked at 9.47. We then checked his PSA in clinic in 2/2022 and it was 12.6, 7.6%fPSA. He had a mpMRI that demonstrated a PIRADS 3 lesion in the posterior peripheral zone. Prostate biopsy one month ago positive for 4+3=7. He presents today to discuss prostate biopsy results. He has a family history of prostate cancer and his father passed away after undergoing what sounds like a radical prostatectomy and had spread of his disease after surgery.

He had a catheter placed at last appointment for PVR over 200 but the day after catheter placed he removed this on his own. He continues to have significant urinary complaints today; he complains of weak urinary stream, hesitancy, incomplete emptying, 5x nocturia, and post void dribbling. He has been taking tamsulosin and it initially helped but he does not see much benefit. He denies any dysuria and gross hematuria. He denies any night sweats fever bone pain and weight loss.

He also has a history of 17 colon polyps removed during a colonoscopy in 2016.

**Review of Systems**

A 14 point review of systems was performed and is negative other than as outlined in HPI.

**Physical Exam****Vitals & Measurements**

T: 36.6 °C (Oral) BP: 121/84

WT: 79 kg WT: 79 kg

Peripheral Pulse Rate: 76 (07/07/22 11:37:00)

Gen: No acute distress, well appearing male

HEENT: normocephalic, atraumatic, extra ocular movement intact, oropharynx patent

CV: regular rate

chest: nonlabored breathing, no audible wheezing

abdomen: soft, nontender to palpation, nondistended, no cva tenderness to palpation bilaterally

DRE (6/2/22): 30g prostate; firm and somewhat nodular on posterior aspect and in the right lobe; prostate was also significantly tender to palpation

MSK: moves all extremities well, distal extremities warm and well perfused

skin: warm and dry

Admitting: Ledbetter MD, Christopher K

**Office Clinic Notes**

neuro: awake, alert, oriented x3, no gross deficits  
 psych: normal mood and affect

within the defined date range

**Assessment/Plan**

1. Prostate cancer, Gleason score 4+3, PSA 12.6 unfavorable intermediate risk
  - Will need Axumin scan to determine stage of prostate cancer, request to methodist placed.
  - Treatment options pending Axumin results
  - Discussed that prostate cancer is generally a slow growing disease that does not affect a man for 10 years after diagnosis.
  - RTC 2 months for discussion of Axumin

**Lab Results**

No qualifying data available.

**2. LUTS**

- Uroflow: voided 123cc, qmax: 8.8mL/s, pattern: low amplitude bell curve
- PVR ~65cc today by bladder scan. PVR today low and does not required catheter placement.
  - Continue tamsulosin
  - Discussed finasteride but patient does not desire starting a medication at this time, will consider again after prostate cancer workup/treatment completed.

**Referral Orders**

Return to clinic in 2 months to discuss results of Axumin and symptom check

**Attestation**

**GU attending:** The patient was seen and examined in the office by the resident under my supervision. We have discussed the findings and exam as noted above. I agree with the history, exam findings and plan as dictated by the resident with any additions made by myself in the chart as indicated.

**Assessment/Plan**

1. Prostate cancer, Gleason score 4+3, PSA 12.6 unfavorable intermediate risk

2. LUTS

- PSMA scan findings reviewed with pt in detail today. PSMA revealed uptake in multiple bilateral pelvic and retroperitoneal LN's. Also noted potential osseous mets in C-spine and rib, but less definitive finding. Discussed we would not recommend local definitive therapy for his PCa as it would not manage distant metastasis. Discussed ADT as option for systemic therapy. However, may require LN biopsy for confirmation of mets. Will refer to heme/onc as he is likely to need further therapy in addition to Lupron.

- Continue tamsulosin. Discussed he can take 0.8mg daily to see if any improvement. Declines Finasteride at this time.

- RTC 2 months following onc referral in case he needs Eligard and for sxs check

#### Chief Complaint

Prostate CA -New Pt

#### History of Present Illness

Mr. George is a 60-year-old gentleman who is currently incarcerated presents to my clinic for evaluation of metastatic prostate cancer. He is PSA was checked at the facility which was initially 13 and he was referred to urology last year. He had an MRI that demonstrated PIRADS 3 lesion in the posterior peripheral zone. He underwent prostate biopsy on 6/2/2022 which showed Gleason 4+3, grade group 3 involving 1 and 50% of the cores on both the right and left prostate. This was followed by PSMA scan on 10/19/2020 at MU H which showed bilateral pelvic and retroperitoneal metastases. Subtle tracer foci within the cervical spine and left posterior third rib could represent osseous metastases but this is not confident diagnosis. Small pulmonary lesions are favored benign.

He has a family history of prostate cancer in the father.

#### Interval History

Patient overall doing well. Denies any fevers, chills, nausea, vomiting. Denies any shortness on exertion. Denies any blood in the urine or bowel or black stools. Denies any numbness or tingling. complains of posterior neck pain and limited range of movement there

#### Review of Systems

Constitutional: No Weight Change, No Fever, No Chills, No Night Sweats, No Fatigue, No Malaise  
ENT/Mouth: No Hearing Changes, No Ear Pain, No Nasal Congestion, No sore throat, No Rhinorrhea, No Swallowing Difficulty  
Eyes: No Eye Pain, No Swelling, No Redness, No Vision Changes  
Cardiovascular: No Chest Pain, No SOB, No Edema, No Palpitations  
Respiratory: No Cough, No Sputum, No Wheezing, No Dyspnea  
Gastrointestinal: No Nausea, No Vomiting, No Diarrhea, No Constipation, No Anorexia, No Dysphagia, No Melena, No Jaundice  
Genitourinary: No Dysuria, No Urinary Frequency, No Hematuria  
Musculoskeletal: neck pain and limited movement  
Skin: No Skin Lesions, No Pruritis,  
Neuro: No Weakness, No Numbness, No Recent Falls  
Psych: No Anxiety/Panic, No Depression, No Insomnia, No SI/HI/AH/VH  
Heme/Lymph: No Bruising, No Bleeding, No Lymphadenopathy  
Endocrine: No Polyuria, No Polydipsia,

No qualifying data available.

Historical Lab ResultsAssessment/Plan

1. Metastatic adenocarcinoma to prostate

**- Denovo hormone naive prostate cancer - low volume**

- prostate biopsy on 6/2/2022 showed Gleason 4+3, grade group 3 involving 1 and 50% of the cores on both the right and left prostate.

- PSMA scan on 10/19/2020 at MU H which showed bilateral pelvic and retroperitoneal metastases. Subtle tracer foci within the cervical spine and left posterior third rib could represent osseous metastases but this is not confident diagnosis. Small pulmonary lesions are favored benign.

- PSA 14

- Plan to start patient on ADT, discussed the side effects of night sweats, fatigue, bone and muscle loss, hot flashes were discussed and patient agreed to get it. Will also start him on Enzalutamide and will keep chemo for later line due to low volume disease.

**Plan:**

- Start him on ADT - given today, next due July 2023

- Start on enzalutamide - no history of seizures or falls.

- Start on Ca / Vit D

- Prolia with the next lupron

- Will Refer to genetics.

- RTC in 2 months for toxicity check

2- Hepatitis C ab positive

- Will check viral load on the next visit.

**Attestation**

EMR and dragon attestation: This medical document was created using an electronic medical record system with dragon computerized dictation system. Although this document has been carefully reviewed, there may still be some phonetic and typographical errors. These errors are purely typographical errors, due to imperfections of the software programs, and do not reflect any compromise in the patient's medical care.

I have spent >60 minutes in the total patient encounter, out of which > 50% of the time was spent in patient counseling and the coordination of care. I have personally reviewed patient's past, family and social history which are mentioned above, other wise negative. I have personally reviewed old records if any and have independently reviewed the patient's recent imaging.

The patient has been informed about the follow-up appointments, any labs/tests needed, along with the means to reach back to us in case of any urgency or emergency. All questions and queries were answered to the patient's satisfaction.

**Hepatitis**

## Interpretive Data

i2: Hep Bs Ag

The interpretation of nonconfirming for HBSAG indicates the presence of HBSAG cannot be confirmed via neutralization.

It is recommended that the patient be evaluated for other serologic markers of HBV infection and that the patient be retested for HBSAG in 4 to 6 weeks.

**Infectious Disease**
